

Ring Sizing Guide

1. Print this page. Use **100% scaling** in printer settings (or “page setup” area).
2. Measure the line below with a ruler. It should be exactly 10 cm long.

3. If you have a ring that fits your intended finger, place it on the nearest matching circle below. Match the inside edge of the ring to the circle. Use the larger size if between two circles.

4. If you don't have a suitable ring, cut out the ring sizer below.

- Cut a slit for slot “A”.
- Wrap the sizer around your finger where the ring will be worn. (Numbers facing out.)
- Pull tab “B” through slot “A” until sizer is snug. Allow size for the knuckle.
- The number aligned with slot “A” is your ring size.
Match this number to the ring size chart (circles) above.

If the measurement lies between two numbers, use a half size.

Example: if the measurement is between 6 and 7, use 6.5.

Tips

- **Comfortable fit.** Your ring should fit comfortably: snug enough so that it won't fall off; loose enough to slide over your knuckle with some resistance.
- **Temperature.** Don't measure when your body temperature is too cold or too hot. A cold finger shrinks; and a hot finger expands. Measure when fingers are at room temperature.
- **Knuckles.** Big knuckles affect your ring size. If your knuckle is a lot larger than the base of your finger, measure the base of your finger and your knuckle – then select a size in between.
- **Wide bands.** A wider band requires a bigger size. If you're purchasing a wide band, move up a half size from your measurement.
- **Smaller or larger?** If you hesitate between two sizes, always go with the larger one.
